

Yizhao Jiang is an Assistant Professor in the Department of Development Management at our university. He is an expert in the fields of development economics, experimental economics, behavioral economics, and digital economics. Dr. Jiang is particularly interested in investigating decision-making processes and the psychological factors that influence individual decision-making. His research focuses on exploring how policymakers can utilize these factors to effectively increase social welfare. Dr. Jiang's academic work has led to valuable insights that inform both academia and industry. He remains committed to continuous learning and growth in his field, and is dedicated to making meaningful contributions to his area of research.
